Compliance Engine backlog

Rebuilt from the team's backlog file: 30 stories and 7 non-functional requirements, planned across the hackathon's build windows. First-view checks follow as a separate, optional add-on.

At a glance

Priority	Stories	Estimate (hrs)	Meaning
Must	14	25.5	Needed for Friday's demo
Should	8	12.5	Build if time allows on Friday morning
Could	2	4	Nice to have
Later	6	-	After the event (not estimated)
Total	**30**	**42**	Plus 7 non-functional requirements, all Must

Hours by build window

Build window	Must	Should	Could	Total hrs
Thu PM	5	0	0	**5**
Thu eve	9	0	0	**9**
Fri AM	9	11	1	**21**
Fri 12-2	2.5	1.5	0	**4**

Reading the plan

- Hours are person-hours, so a team of 2-4 can split them. Friday morning is the busiest window (21 hrs, 9 of them Must), so start the Rights Passport and fan-upload stories first and drop Should stories if time runs short. The window totals leave out S-16 (Could, 3 hrs), which the file schedules for later.
- Critical path: S-01 ScorePlay access -> S-03 standard asset format -> S-08 verdicts -> S-09 reasons -> S-11 Rights Passport -> S-22 demo. S-17 and S-18 (fan uploads) are the irl.group layer on top.
- **Safe default** runs through everything: missing data or no matching rule means Review, never Allow (S-03, S-08, NFR-3).
- The first-view add-on adds 8 Should hours on Friday morning if the team has room; the rest is for later.

1. Hackathon stories by epic

Data connection 3 stories, 4 hrs

ID	Story	Acceptance criteria	Priority	When	Hrs	Depends on
S-01	As a developer, I can read assets from both clubs' ScorePlay platforms with our own API keys.	Lists 20+ assets per club with metadata; keys kept in environment variables, not in code.	**Must**	Thu PM	1	-
S-02	As a developer, I can query the pre-indexed TwelveLabs index for both game broadcasts.	Search returns time-stamped moments from the Spurs game and Tottenham vs Man United.	**Must**	Thu PM	1	-
S-03	As the rules engine, I receive every ScorePlay asset in one standard format.	Maps league, club, type, source (broadcast, team photo, press conference, published edit, fan upload), length, game end time and rights partner; missing fields lead to Review, never Allow.	**Must**	Thu PM	2	S-01

Detection 5 stories, 11 hrs

ID	Story	Acceptance criteria	Priority	When	Hrs	Depends on
S-04	As a media producer, I see which rostered players appear in an asset.	Players matched from the provided rosters and headshots; opponents listed separately; spot-check of 10 assets is correct.	**Must**	Thu eve	2	S-02, S-03
S-05	As a partnerships manager, I see which partner logos and rival brands appear in an asset.	Detects the provided partner logos (front of shirt, sleeve, major sponsors); flags whether the shirt sponsor is visible; flags brands on the rival list.	**Must**	Thu eve	3	S-02, S-03
S-06	As a producer, I'm told when broadcaster graphics are visible.	Score bug or broadcaster graphics detected on broadcast clips and passed to rule N-07.	**Should**	Fri AM	1	S-02
S-07	As a compliance reviewer, I'm told about unidentified people and likely children.	Counts unknown people and flags likely minors; never tries to name a fan.	**Should**	Fri AM	2	S-02
S-16	As a partnerships manager, I see how long each sponsor logo was on screen.	Seconds on screen per partner logo for each video.	**Could**	Later	3	S-05

Rules engine 4 stories, 6 hrs

ID	Story	Acceptance criteria	Priority	When	Hrs	Depends on
S-08	As a compliance reviewer, every asset gets a verdict for 7 uses in 3 regions.	Loads rules.json; strictest verdict wins; time limits become a usable-until date and turn to Block when passed; uses no rule covers default to Review; the 4 sample assets reproduce the published test results.	**Must**	Thu eve	2	S-03
S-09	As a reviewer, I can read why each verdict was given.	Each cell lists its reasons, most decisive first, with rule IDs; optional AI summary paragraph never contradicts the grid.	**Must**	Fri AM	2	S-08
S-14	As the club's legal team, I can change a rule without a developer.	Editing a value (e.g. 60s to 45s) and re-running updates verdicts on screen; shown live in the demo.	**Should**	Fri AM	1	S-08
S-20	As a producer, I can reuse published edits safely.	Allowed on the platform it was published on; Review for any other platform.	**Should**	Fri AM	1	S-08

Write-back 1 story, 2 hrs

ID	Story	Acceptance criteria	Priority	When	Hrs	Depends on
S-10	As a club media team, I see the verdict on the asset inside ScorePlay.	Verdict, reasons and usable-until date are saved on the asset and visible in ScorePlay after refresh.	**Must**	Thu eve	2	S-01, S-08

Rights Passport 4 stories, 8 hrs

ID	Story	Acceptance criteria	Priority	When	Hrs	Depends on
S-11	As a producer, I open one asset and see its passport.	Shows preview, 7x3 grid with text labels (not color alone), reasons and usable-until date; loads in under 3 seconds.	**Must**	Fri AM	3	S-08, S-09
S-12	As a producer, I can scan the whole library by status.	List with overall status per asset; filters for club, use, region, verdict and expiring soon.	**Should**	Fri AM	2	S-11
S-13	As a social media manager, I can ask what I can post in plain words.	"What can I post on TikTok in the UK this week?" returns the matching assets, consistent with their grids.	**Should**	Fri AM	2	S-12
S-15	As a producer, I'm warned before content expires.	List of assets that expire in the next 7 days, with the uses affected.	**Could**	Fri AM	1	S-08

Watch Party Clearance 3 stories, 6 hrs

ID	Story	Acceptance criteria	Priority	When	Hrs	Depends on
S-17	As a fan at a watch party, I upload photos with a consent tap.	Upload via the real-time path; fan consent and guardian consent stored with the asset; no consent means Block.	**Must**	Fri AM	2	S-01
S-18	As the club, I get only cleared fan photos in my library.	Live check shows the grid within seconds; cleared photos go to the club library tagged 'fan content - consent on file' with the fan credited; rival-logo and child-without-consent cases are blocked with reasons.	**Must**	Fri AM	2	S-08, S-17
S-19	As a venue running a watch party, my screens only show content cleared for public display.	Venue profile records official status and presenting sponsor category; playlist includes only venue-cleared assets; sponsor conflicts are blocked.	**Should**	Fri AM	2	S-08

Demo 4 stories, 5 hrs

ID	Story	Acceptance criteria	Priority	When	Hrs	Depends on
S-21	As the team, we have a demo set covering every verdict.	20-30 assets per club plus 10 fan photos, including rival logo, child, no-consent and over-length cases.	**Must**	Thu PM	1	S-01
S-22	As presenters, we can run the 3-minute demo even if the network fails.	Rehearsed script; backup screenshots and screen recording of each step.	**Must**	Fri 12-2	2	S-11, S-18
S-23	As judges, we know the rules are samples.	'Sample rules - not legal advice' shown in the app and on slides; verdicts described as recommendations a person confirms.	**Must**	Fri 12-2	0.5	-
S-24	As judges, we understand the business case.	Slides: problem, demo, business model (clubs, sponsors, venues), roadmap.	**Should**	Fri 12-2	1.5	-

2. After the event

Roadmap items from the team's file; not estimated for the hackathon.

ID	Story	Acceptance criteria	Priority	When	Hrs	Depends on
S-25	As a fan, I give photo consent inside WhatsApp.	WhatsApp Flows collects fan and guardian consent and links it to the upload.	Later	Later	-	S-17
S-26	As a venue, I message my guests from my own WhatsApp Business number.	Venue onboarding through WhatsApp Embedded Signup v4.	Later	Later	-	-
S-27	As a venue or vendor, I plan watch-party programming in irl.group.	Programming calendar, capacity, RSVP list, vendor slots and sponsor rules per venue.	Later	Later	-	S-19
S-28	As irl.group, we can reach every ScorePlay club.	Application to the ScorePlay Connect partner program submitted.	Later	Later	-	-
S-29	As a club, the engine uses my real rules.	Sample rules replaced with the clubs' rule sheets and reviewed by their legal teams.	Later	Later	-	S-14
S-30	As a compliance lead, I can see who overrode a verdict and why.	Audit log of every override with person, time and reason.	Later	Later	-	S-10

3. Non-functional requirements

ID	Requirement	Detail	Priority
NFR-1	**Privacy**	Never identify fans by face; only flag 'unknown person'.	Must
NFR-2	**Human in the loop**	Verdicts are recommendations; a person confirms any Review or override.	Must
NFR-3	**Safe default**	Anything unknown or not covered by a rule is Review, never Allow.	Must
NFR-4	**Speed**	A single-asset check completes in a few seconds during the live demo.	Must
NFR-5	**Both clubs**	Every feature works for the Spurs (NBA) and Tottenham (Premier League) data.	Must
NFR-6	**Accessibility**	Verdicts shown with text labels, not color alone.	Must
NFR-7	**Secrets**	API keys never committed to code or shown on screen.	Must

4. Add-on: first-view checks

Not in the team's backlog file. These carry over the first-view requirements from the previous version, rewritten in the same format and numbered S-31 onward so they can be pasted into the file or dropped. “First view” means the cover frame, the first 3 seconds, each platform's crop, the venue screen and chat previews.

ID	Story	Acceptance criteria	Priority	When	Hrs	Depends on
S-31	As a producer, the cover frame of every asset is checked on its own.	Cover/thumbnail runs through every detection and rule; passport shows a separate 'first view' row; an asset can't be cleared if its cover is blocked.	**Should**	Fri AM	2	S-04, S-05, S-08
S-32	As a producer, the first 3 seconds of each clip are checked, because that's what feeds and autoplay show.	Frames sampled at 2 per second for 0-3s; any Block-level detection flags the first view.	**Should**	Fri AM	2	S-02, S-31
S-33	As a social media manager, I see how each platform will crop the asset.	Previews Instagram 3:4 grid, 4:5 feed, 9:16 Reels/TikTok/Shorts and 16:9 YouTube; logos re-checked inside each crop; a cropped-out shirt sponsor on sponsor content = Review (V-02).	**Should**	Fri AM	3	S-05, S-31
S-34	As a venue or fan, the first thing I see on a screen or in a chat preview is cleared.	Venue playlist and irl.group/WhatsApp link previews use a cover cleared for that use; otherwise a neutral club placeholder.	**Should**	Fri AM	1	S-19, S-31
S-35	As a partnerships manager, gambling brands in the first view are caught.	Gambling brand in cover or first 3s = Review, Block for under-18 audiences (V-03); a gambling logo on the front of a Premier League shirt is flagged as unexpected for 2026-27.	**Could**	Later	1	S-05
S-36	As a partnerships manager, sponsored posts disclose the partnership at the start.	Sponsor-use videos show 'Ad' or 'Paid partnership' in the video at the start and at the start of the caption (V-04); links that skip the start = Review (V-05).	**Could**	Later	2	S-31
S-37	As a producer, text and logos on covers stay inside platform safe zones.	No key text or logo in the top or bottom 135px of a 1080x1920 cover (V-06).	**Could**	Later	2	S-33
S-38	As a producer, the engine suggests a compliant cover frame.	Offers the 3 best frames that pass every first-view rule for the chosen platform.	**Could**	Later	3	S-31, S-33
S-39	As a compliance lead, nothing is published until its first view is cleared.	Publish and share are disabled while the first view is Review or Block; overrides need a reason and are logged.	**Could**	Later	1	S-30, S-31

New sample rules these stories use

Rule	When	Uses	Verdict
V-01 Cover blocked	Cover frame triggers any Block rule	All	Block
V-02 Sponsor cropped	Sponsor use and shirt sponsor outside a platform crop	That platform	Review
V-03 Gambling in first view	Gambling brand in cover or first 3s	All; Block for under-18 audiences	Review
V-04 Missing disclosure	Sponsor use without 'Ad' / 'Paid partnership' at the start	Social platforms	Review
V-05 Skipped disclosure	Link to a sponsor video starts after 0:00	Social platforms	Review
V-06 Text outside safe zone	Key text or logo in top/bottom 135px of a 9:16 cover	Reels, TikTok, Shorts	Review
