Compliance Engine: stories and requirements

Backlog for irl.group's Spurs^2 Hackathon Challenge 2 build, with expanded requirements for pre-reviewing what people see first.

Built from three documents - the Compliance Pack page, the Rights and Compliance brief and the sample rule sheet - plus quick checks of current platform and disclosure rules. Must stories are the hackathon demo; Should and Could are the roadmap.

Epics	Stories	Must	Should	Could	New first-view stories
9	52	32	14	6	16

What “first view” covers

- **Cover and opening:** the thumbnail and first 3 seconds fans see in a feed or autoplay before tapping.
- **Platform crops:** Instagram's profile grid now shows a 3:4 crop (changed early 2025); feed posts are 4:5; Reels, TikTok and Shorts are 9:16; YouTube is 16:9; link previews have their own image.
- **Venue screen and chat:** the first frame on a watch-party screen and the preview in an irl.group or WhatsApp chat.
- **Before first publish:** nothing goes out until its first view is cleared.

Rules behind the first-view stories

- **Disclosure:** FTC endorsement guidance says a sponsorship disclosure only in the video description isn't enough; it should be in the video itself, at the start for short videos, and links that skip the start can skip the disclosure. Starting a post with “Ad:” or “#ad” is likely effective.
- **Thumbnails:** YouTube's thumbnail policy covers misleading, violent, sexual and impersonating thumbnails; violations can lead to removal, age restriction or strikes.
- **Gambling sponsors:** Premier League clubs agreed to remove gambling sponsors from the front of shirts from the 2026-27 season; sleeves and pitchside boards can still show them.
- **Safe zones:** common guidance is to keep text out of the top and bottom 135px of a 1080x1920 Reel cover.

How to read the tables

- **ID** = epic and number. **Priority:** **Must** for Friday's demo, **Should** next, **Could** later.
- Rule IDs (G-01, N-06, F-01...) refer to the sample rule sheet; V-rules are new and listed on the last page.

E1 Asset intake and detection

Get assets from both clubs' ScorePlay libraries and live uploads, and find what's in them.

ID	Story	Acceptance criteria	Priority
E1-01	As a producer, I want the engine to pull assets from both clubs' ScorePlay platforms so I don't upload anything twice.	• Reads assets and metadata with our own ScorePlay API keys for each team • Covers photos, broadcast clips, press conferences, published edits • New assets picked up within 1 minute (webhook or polling)	**Must**
E1-02	As a producer, I want new uploads checked the moment they arrive, the way a club works on match day.	• Uses the real-time upload path from the challenge slide • Verdict shown within 30 seconds of upload for a photo	**Must**
E1-03	As a producer, I want players identified from the provided rosters and headshots.	• Detected players listed by name with confidence • Opponent players tagged separately • Below-threshold matches shown as 'unknown person', never guessed	**Must**
E1-04	As a partnerships lead, I want partner logos detected using the provided logo set.	• Detects front-of-shirt, sleeve and major-sponsor logos • Reports where (front of shirt, sleeve, board) and, for video, when	**Must**
E1-05	As a producer, I want rival brands, broadcaster graphics, music and on-screen text detected.	• Rival brands matched against partner categories • Broadcaster score bug/graphics flagged with partner name • Music flagged as none, cleared or uncleared • On-screen text read (OCR) for later checks	**Should**
E1-06	As a producer, I want unknown people and likely minors flagged without identifying fans.	• Counts unknown people; flags likely minors • Never runs face identification on fans	**Must**

E2 Rules engine

Turn detections into verdicts using the editable rule sheet (rules.json, 26 sample rules).

ID	Story	Acceptance criteria	Priority
E2-01	As a rights manager, I want rules kept in a file I can edit without code changes.	• Rules load from rules.json at start and on change • Each rule has ID, scope, conditions, uses, regions, verdict, limits, reason	**Must**
E2-02	As a producer, I want one verdict per use and region, with the strictest rule winning.	• 7 uses x 3 regions per asset • Block > Review > Allow (limits) > Allow • Every matching rule's reason is kept, strictest first	**Must**
E2-03	As a producer, I want nothing cleared by default.	• Any use no rule covers shows Review: 'No rule covers this use'	**Must**
E2-04	As a producer, I want time limits turned into dates.	• '30 days after game' shows as a 'usable until' date • After that date the cell turns Block and says Expired	**Must**
E2-05	As a rights manager, I want separate rules for the NBA and the Premier League in one engine.	• Rules scoped to Both, NBA or PL • Same asset checked against its own league only	**Must**
E2-06	As a rights manager, I want to test a rule change on sample assets before saving it.	• Preview shows which assets' verdicts would change	**Could**

E3 Rights Passport view

Show in seconds what can be used, where and for how long.

ID	Story	Acceptance criteria	Priority
E3-01	As a producer, I want a passport grid for each asset.	• Uses down, regions across, colored verdict pills • Tap a cell to see the reasons and limits • Loads in under 2 seconds	**Must**
E3-02	As a producer, I want to search in plain language.	• 'What can I post on TikTok in the UK this week?' returns matching assets • Filters: club, use, region, verdict, expiring soon	**Should**
E3-03	As a producer, I want to see what's expiring soon.	• List of assets expiring in the next 7 days, soonest first	**Should**
E3-04	As a judge, I want the same view to work for both clubs.	• Switch between Tottenham and Spurs without reloading	**Must**

E4 Write-back, approvals and audit

Store verdicts on the asset itself and keep a trail people can trust.

ID	Story	Acceptance criteria	Priority
E4-01	As a producer, I want verdicts and reasons saved onto the asset in ScorePlay.	• Writes verdict grid, reasons, usable-until and rule-sheet version • Visible in ScorePlay without opening our app	**Must**
E4-02	As a rights manager, I want verdicts treated as recommendations a person confirms.	• Approve / reject per asset; who and when recorded	**Must**
E4-03	As a rights manager, I want to override a verdict with a reason.	• Override needs a written reason • Original verdict kept; override shown with a marker	**Should**
E4-04	As a rights manager, I want a full history for each asset.	• Log of checks, rule-sheet versions, overrides and approvals	**Should**
E4-05	As a producer, I want old verdicts re-checked when the rules change.	• Changing rules.json re-runs affected assets and shows what changed	**Could**

E5 First-view pre-review NEW / EXPANDED

Check what people see first - the cover frame, the first 3 seconds, each platform's crop, the venue screen and the chat preview - before anything is published. Covers all four meanings of 'first view'.

ID	Story	Acceptance criteria	Priority
E5-01	As a producer, I want the thumbnail or cover frame checked on its own, separately from the full asset.	• Cover frame runs through every detection and rule • Passport shows a separate 'first view' row with its own verdict • Asset can't be cleared if its cover is blocked	**Must**
E5-02	As a producer, I want the first 3 seconds of every clip checked, because that's what autoplay and feeds show.	• Frames sampled at least 2 per second for 0-3s • Any block-level detection in that window flags the first view	**Must**
E5-03	As a producer, I want to see each platform's crop before posting.	• Shows Instagram 3:4 profile-grid crop, 4:5 feed, 9:16 Reels/TikTok/Shorts, 16:9 YouTube, link preview • Detections re-checked inside each crop, not just the full frame	**Must**
E5-04	As a partnerships lead, I want the shirt sponsor visible in the first view of sponsor content.	• For sponsor use, front-of-shirt logo must be visible in the cover and first 3s • If a crop cuts it off, that platform shows Review: 'sponsor cropped out'	**Must**
E5-05	As a partnerships lead, I want rival and gambling brands caught in the first view.	• Rival-category brand in the cover = Block for sponsor use and venue screens • Gambling brand in first view = Review; Block where the audience may include under-18s • PL footage: a gambling logo on the front of a shirt is flagged as unexpected for 2026-27	**Must**
E5-06	As a producer, I want minors kept out of covers unless a guardian consented.	• Likely minor in the cover without guardian consent = Block, even if later frames are OK • Suggest a different cover frame	**Must**
E5-07	As a producer, I want broadcaster graphics kept out of covers used outside their allowed uses.	• Score bug or broadcaster graphics in cover = Block for sponsor use • Reason names the rights partner	**Should**
E5-08	As a producer, I want sponsored posts to disclose the partnership in the first view.	• Sponsor-use videos need a visible 'Ad', 'Sponsored' or 'Paid partnership' label in the video itself, at the start • Caption must start with the label, before any 'more' cut-off • Missing label = Review: 'disclosure not in first view'	**Must**
E5-09	As a producer, I want links that skip the start of a sponsored video flagged.	• Timestamped links past 0:00 on sponsor content = Review, because they skip the disclosure	**Should**
E5-10	As a producer, I want covers checked against platform content rules.	• Flags covers likely to be seen as misleading (cover moment not in the clip) or graphic • Reason cites the platform rule	**Should**
E5-11	As a producer, I want text and logos inside each platform's safe zone.	• Reels/TikTok covers: no key text or logo in the top or bottom 135px of a 1080x1920 frame • Text-heavy graphics: text inside the center 70%	**Should**
E5-12	As a producer, I want the engine to suggest a compliant cover frame.	• Offers the 3 best frames that pass every first-view rule for the chosen platform • Prefers frames with rostered players and visible shirt sponsor	**Should**
E5-13	As a fan, I want captions from the first second so I can follow without sound.	• Videos with speech flagged if captions don't start within the first 3s • Images flagged if alt text is missing	**Could**
E5-14	As a venue host, I want to see exactly what appears first on my screen.	• Venue-screen preview shows the first frame at venue aspect ratio • First frame checked against the venue's own sponsor (venue conflict rule)	**Must**

ID	Story	Acceptance criteria	Priority
E5-15	As a fan in an irl.group chat, I want shared club content to show a cleared preview.	• Chat and WhatsApp link previews use a cover cleared for that platform and region • If no cleared cover exists, show a neutral club placeholder	**Should**
E5-16	As a rights manager, I want nothing published until its first view is cleared.	• Publish/share buttons disabled while the first view is Review or Block • Override needs a written reason and is logged	**Must**

E6 Watch Party Clearance (irl.group)

Clear club content for venue screens at watch parties.

ID	Story	Acceptance criteria	Priority
E6-01	As a venue host, I want my screen to show only content cleared for public display.	• Venue screen pulls only assets with Allow or Allow (limits) for venue_screen	**Must**
E6-02	As a partnerships lead, I want venue sponsor conflicts caught.	• Venue profile lists its presenting sponsor category • Conflicting venues get Block for venue screen (rule G-08)	**Must**
E6-03	As a club, I want broadcast footage shown only at official watch parties.	• Non-official venues get Block for broadcast footage (rule N-06)	**Must**
E6-04	As a venue host, I want a ready pack of cleared content for each game.	• Pregame, halftime and postgame sets, refreshed as verdicts change	**Could**

E7 Fan uploads and consent (irl.group)

Turn watch-party photos into safe club content.

ID	Story	Acceptance criteria	Priority
E7-01	As a fan, I want to give consent with one tap when I upload.	• Consent stored with the photo and shown on the passport	**Must**
E7-02	As a parent, I want to give guardian consent for my child.	• Without it, any photo with a likely minor is Block everywhere (rule G-01)	**Must**
E7-03	As a fan, I want to give consent inside WhatsApp.	• Consent collected through a WhatsApp Flow and synced to irl.group	**Could**
E7-04	As a club, I want cleared fan photos added to our library and credited.	• Cleared photos sent to ScorePlay tagged 'fan content - consent on file' with the fan's credit • Usable for 90 days (rule F-01)	**Must**
E7-05	As a producer, I want an option to blur unknown faces instead of rejecting the photo.	• Blurred copy created and re-checked; original kept private	**Could**

E8 Alerts and takedowns

Keep live posts compliant after publishing.

ID	Story	Acceptance criteria	Priority
E8-01	As a producer, I want an alert before posted content expires.	• Alert 48 hours before usable-until for anything marked published	**Should**
E8-02	As a producer, I want a takedown list when content expires or rules change.	• List of live posts now Block, with platform and reason	**Should**

E9 Demo and hackathon readiness

What the judges need to see on Friday.

ID	Story	Acceptance criteria	Priority
E9-01	As a judge, I want to know the rules are samples.	• Every screen and export labels rules as sample, not real terms	**Must**
E9-02	As a presenter, I want a 3-minute demo on both clubs' assets.	• Tottenham photo and Spurs clip passports, ScorePlay write-back, search, fan upload, venue screen, first-view crop check	**Must**
E9-03	As a presenter, I want to edit one rule live.	• Change a limit in rules.json; affected verdicts update on screen	**Should**
E9-04	As a presenter, I want a fallback if the network fails.	• Screenshots and a recorded run of every demo step	**Must**

Non-functional requirements

Area	Requirement
Speed	Photo verdict within 30s of upload; passport view loads in under 2s
Explainability	Every verdict has a plain-English reason naming the rule ID
Human control	Verdicts are recommendations; a person approves; overrides need a reason
Privacy	No face identification of fans; consent stored per photo; unknown people only counted
Security	API keys kept server-side; never shown in the app or demo
Honesty	Sample rules labeled everywhere; simulated data labeled
Accessibility	Verdicts shown by label as well as color; keyboard usable; works at phone width

New first-view rules to add to the rule sheet

Sample rules in the same format as rules.json. They apply to the cover frame, the first 3 seconds and each platform crop.

New rule	When	Uses	Verdict
V-01 Cover blocked	Cover frame triggers any Block rule	All	Block
V-02 Sponsor cropped	Sponsor use and shirt sponsor outside a platform crop	That platform	Review
V-03 Gambling in first view	Gambling brand in cover or first 3s	All; Block for under-18 audiences	Review
V-04 Missing disclosure	Sponsor use without 'Ad' / 'Paid partnership' at the start	Social platforms	Review
V-05 Skipped disclosure	Link to sponsor video starts after 0:00	Social platforms	Review
V-06 Text outside safe zone	Key text or logo in top/bottom 135px of a 9:16 cover	Reels, TikTok, Shorts	Review
V-07 Misleading cover	Cover moment not found in the clip	YouTube, all social	Review
V-08 Uncaptioned opening	Speech in first 3s with no captions	Social platforms	Review (could)

Friday's demo scope: the Must stories

32 Must stories. Build in epic order; E5 first-view checks reuse E1 detections and E2 rules on the cover, the first 3 seconds and each crop.

ID	Must story
E1-01	As a producer, I want the engine to pull assets from both clubs' ScorePlay platforms so I don't upload anything twice.
E1-02	As a producer, I want new uploads checked the moment they arrive, the way a club works on match day.
E1-03	As a producer, I want players identified from the provided rosters and headshots.
E1-04	As a partnerships lead, I want partner logos detected using the provided logo set.
E1-06	As a producer, I want unknown people and likely minors flagged without identifying fans.
E2-01	As a rights manager, I want rules kept in a file I can edit without code changes.
E2-02	As a producer, I want one verdict per use and region, with the strictest rule winning.
E2-03	As a producer, I want nothing cleared by default.
E2-04	As a producer, I want time limits turned into dates.
E2-05	As a rights manager, I want separate rules for the NBA and the Premier League in one engine.
E3-01	As a producer, I want a passport grid for each asset.
E3-04	As a judge, I want the same view to work for both clubs.
E4-01	As a producer, I want verdicts and reasons saved onto the asset in ScorePlay.
E4-02	As a rights manager, I want verdicts treated as recommendations a person confirms.
E5-01	As a producer, I want the thumbnail or cover frame checked on its own, separately from the full asset.
E5-02	As a producer, I want the first 3 seconds of every clip checked, because that's what autoplay and feeds show.
E5-03	As a producer, I want to see each platform's crop before posting.
E5-04	As a partnerships lead, I want the shirt sponsor visible in the first view of sponsor content.
E5-05	As a partnerships lead, I want rival and gambling brands caught in the first view.
E5-06	As a producer, I want minors kept out of covers unless a guardian consented.
E5-08	As a producer, I want sponsored posts to disclose the partnership in the first view.
E5-14	As a venue host, I want to see exactly what appears first on my screen.
E5-16	As a rights manager, I want nothing published until its first view is cleared.
E6-01	As a venue host, I want my screen to show only content cleared for public display.
E6-02	As a partnerships lead, I want venue sponsor conflicts caught.
E6-03	As a club, I want broadcast footage shown only at official watch parties.
E7-01	As a fan, I want to give consent with one tap when I upload.
E7-02	As a parent, I want to give guardian consent for my child.
E7-04	As a club, I want cleared fan photos added to our library and credited.
E9-01	As a judge, I want to know the rules are samples.
E9-02	As a presenter, I want a 3-minute demo on both clubs' assets.
E9-04	As a presenter, I want a fallback if the network fails.

Open questions

- Organizers: is there a real rule sheet per club, including cover and disclosure rules?
- ScorePlay: can we store a separate first-view verdict and a chosen cover frame on the asset?
- TwelveLabs: best way to sample frames in the first 3 seconds and re-check detections inside a crop?
- Clubs: do sponsors require their logo in the cover, and do you avoid gambling brands in youth-facing posts?
